課程宗旨： Course Objectives	The course is to provide an overall content to link between the calculus and other mathematics topics that were taught in high school and move forward. In particular, we cover some theoretical treatment like fundamental theorem of calculus, mean value theorem, chain rule, l'Hopital rule, integration by parts, to name a few. Some other topics like infinite sequences and series, partial derivatives, and multiple integrals will also be discussed, for at least the introductory items. After all, some applications of calculus in science and engineering will be studied too from time to time to build solid learning experience for students.
