課程宗旨： Course Objectives	This course equips senior undergraduate and graduate students with essential machine learning and deep learning skills using Matlab, integrating both theory and hands-on implementation. Focus will be on classification and regression models, clustering methods. Through Matlab's online modules (for example, Machine Learning Onramp, Deep Learning Onramp, and Machine Learning Techniques in MATLAB), students will explore key ML models, deep learning architectures (CNNs, RNNs), feature engineering, and model optimization. Emphasizing EMI (English as a Medium of Instruction), the course fosters technical communication in English, enhancing the ability of students to apply ML techniques in research and industry for data analysis, computer vision, and intelligent/wireless communications systems.
