課程宗旨： Course Objectives	TThe objective of this course is to familiarize the student with the process of implementing a system-level algorithm at the RTL level in Verilog HDL. Upon completion, the student will be able to carry out the RTL (register-transfer level) design and implementation of a digital IC module (or IP) from a system-level algorithm. To reach this, this course will also focus on the applications of pipeline and parallel techniques to the RTL design and implementation of system-level algorithms.
