

授課教師：Fandi
Dwiputra
Suprianto

Instructor:Fandi Dwiputra
Suprianto

課程名稱：計算流體力學

Course Title : Computational Fluid
Mechanics

2026/5/6

<p>課程代號： ME6802701 Course Code 學分數： 3 Credits</p>	<p>必選修：選修/半學年 Required/Elective:Elective/Half Yr. 先修課程： Prerequisites</p>
<p>節次教室： R6(T3-303) R7(T3-303) R8(T3-303) Time/Location</p>	
<p>專業核心能力： Core Professional Competencies</p>	
<p>課程網址： Course Website</p>	
<p>課程宗旨： Course Objectives</p>	<p>各種不同的描述流體運動的數學模式，結構性／非結構性網路之建立方法，有限差分法，有限體積法及有限元素法之介紹；各種不同邊界條件之處理方法，人工黏滯性模式，流場之後處理：升力，阻力之計算，力矩之計算，流線、等壓線、等溫線之繪製；高速計算及程式之最佳化處理；包含向量化及平行化。 Computational Fluid Dynamics (CFD) is a popular method to simulate flow motion and heat transfer in engineering problems. This course aims to introduce fundamentals knowledge of CFD such as governing equations, discretization method, numerical schemes and programming skills to students. The finite volume method which is commonly used in commercial CFD packages is presented in this course. It will be used to discretize the continuity equation, Navier-Stokes equations and the energy equation. Turbulence models such as the standard k-ε model are explained. Fluid-structure interaction problems are considered as the benchmark test in this course, so students can understand how a flow problem is solved by the proposed CFD method.</p>
<p>課程大綱： Outline of Lectures</p>	<ol style="list-style-type: none"> 1. Introduction 2. Governing Equations 3. 1-D Transport Equation 4. Finite Volume Method 5. Projection Method 6. Benchmark Flow Problems 7. Turbulence Models 8. Parallel Computation
<p>授課方式： Method of Instruction</p>	<p>講授 Lecture：50% 分組討論 Group discussion：10% 案例研討 Case study：20% 操做練習 Practical exercises：20% 講授 Lecture：%</p>

教科書： Kajishima, T. and Taira, K. 2017 Computational Fluid Dynamics.
Textbooks Springer, Cham, Switzerland.
