課程宗旨： Course Objectives	Statistics II aims at statistical inferences which try to "guess" population parameters based on sample data. Statistical inference consists of two topics --- hypothesis testing and interval estimation. Statistical inference infers population parameters based on sample data and assesses the sampling errors through probability statements. Specifically, we discuss several sample statistics and their associated sampling distributions which are used for assessing the sampling errors.
課程大綱： Outline of Lectures	Week 1 Introduction to statistical inference Week 2 Sample statistics and sampling distributions Week 3 Rationale behind statistical inference Week 4 Rationale behind hypothesis testing Week 5 Hypothesis testing on population proportion Week 6 Rationale behind interval estimation Week 7 Confidence interval on population proportion Week 8 Review and midterm exam. Week 9 Hypothesis testing and confidence interval on population mean Week 10 Hypothesis testing on population variance Week 11 Confidence interval on population variance Week 12 Hypothesis testing on difference of two population means Week 13 Confidence interval on difference of two population means Week 14 Hypothesis testing on ratio of two population variances Week 15 Confidence interval on ratio of two population variances Week 16 Review and final exam.
