課程宗旨： Course Objectives	1. This course is the second semester of a year-long chemistry sequence designed primarily for interdisciplinary program students who require a full year of chemistry, as well as for other interested students. The course covers major topics in chemistry and provides a solid foundation for future applications in engineering and related fields. Emphasis is placed on fundamental principles, problem-solving skills, and practical applications relevant to modern science and technology. 2. The main topics covered this semester include: Solid and liquid states and solutions, reaction rates and chemical equilibrium, acid–base equilibria, solubility and complex-ion equilibria, thermodynamics and equilibrium, electrochemistry, and nuclear chemistry.
